REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

None of the prior art discloses the claimed insulation displacement connector with a built-in board as being recited in the independent claims of the present invention.

Claims 1-4 recite inter alia an insulation displacement connector with a built-in board comprising an insulation displacement terminal including a body having an insulation displacement blade connectable with an insulated wire; a main housing; a bottom plate; a terminal retainer portion; a circuit board; a first cover housing attached to the main housing, wherein a first retaining space for the insulation displacement terminal defined between the main housing and the first cover housing; a second cover housing attached to the main housing, wherein a second retaining space for the circuit board is defined between the main housing and the second cover housing, wherein the insulated wire has a pair of bent portions, formed by the first covering housing, at both sides of the body of the insulation displacement terminal.

Claims 5-6 recite inter alia an insulation displacement connector with a built-in board comprising an insulation displacement terminal including a body having an insulation displacement blade connectable with an insulated wire; a main housing; a bottom plate; a terminal retainer portion; a circuit board; a first cover housing attached to the main housing, wherein a first retaining space for the insulation displacement terminal defined between the main housing and the first

cover housing; a second cover housing attached to the main housing, wherein a second retaining space for the circuit board is defined between the main housing and the second cover housing; and projection and an end wall provided on the first cover housing and adapted to bend the insulated wire at both side portions of the body of the insulation displacement terminal.

Claims 7-11 recite inter alia an insulation displacement connector with a built-in board comprising an insulation displacement terminal including a body having an insulation displacement blade connectable with an insulated wire; a main housing; a bottom plate; a terminal retainer portion; a circuit board; a first cover housing attached to the main housing, wherein a first retaining space for the insulation displacement terminal defined between the main housing and the first cover housing; a second cover housing attached to the main housing, wherein a second retaining space for the circuit board is defined between the main housing and the second cover housing, wherein the second cover housing has a portion for receiving an insulation displacement load of the insulation displacement terminal via the bottom plate and circuit board, wherein the portion is formed on a position opposed to the terminal retainer portion of the main housing.

The art of record does not disclose the claims' limitations, nor would it be obvious To modify the art of record so as to include the above limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
